

GARFORTH SECURITY

Your all-in-one wireless security solution

Control security, automation and video from your
Android Tablet and the HomeControlHUB app.

You're in control of your security system, cameras and home automation devices through our innovative product range.

We can protect what matters most from the inside of your property to the perimeter, whether you're at home or away, with our range of apps and smart security solutions.

Take control with the AndroidTablet and HomeControlHUB

Enjoy a completely unified experience, with the AndroidTablet and HomeControlHUB app.

You can control your security system, cameras and smart home devices from one interface, making the concept of convenient control of your entire security and home automation a reality.

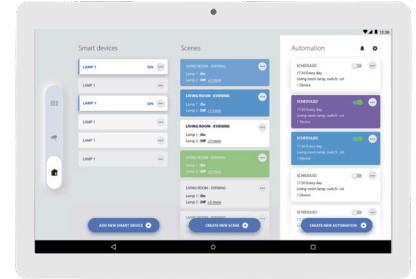

Automate your life with smart home devices

Switch devices on and off right from the HomeControlHUB dashboard or the dedicated Automation page.

In addition to the manual on/off control the smart home devices can be activated on a calendar schedule set up either by the security professional or the end user; this could be to turn individual devices on and off at specific times or days for example bringing on a lamp in the evening to make the home more welcoming as the occupier returns.

Scenes can also be created to perform a collection of tasks together creating a single control resulting in a group of actions such as switching off all of the downstairs lighting when the user goes to bed.

Complete visibility around your property and the ability to take action

Grab the AndroidTablet and open HomeControlHUB to access your cameras and take action by manually activating the system's loud siren to startle and discourage potential intruders. You can view up to 16 cameras through your tablet for complete peace of mind.

Protect what's on your drive as well as what's in your property

Our systems can be set up to protect cars, vans, caravans and any other movable vehicles whilst it is parked at your home, ensuring you're notified via our smartphone app if anything untoward happens.

Protection at the perimeter

It's not just inside your home that's protected, the system allows devices to be installed across your entire perimeter to cover gardens, outbuildings, drives and more.

Speak to your security installer and they can deliver a system that detects intruders and alerts you via the smart device app, before a break-in can even be attempted.

Detection alerts can also be accompanied by short video clips from cameras overlooking the same area when compatible cameras are used.

More than just security

We can protect you, your family and your home from all types of fire and carbon monoxide gas leaks through our range of safety sensors. Panic buttons can be set up in case of medical issues or emergencies, and our detectors can be programmed to alert you if an elderly relative has not moved about their property for a pre determined amount of time, promoting independent living.
